

Team member's details : Young Ladies, Emaan Abdul-Majid, emaanana@gmail.com, USA, Data Science

Problem description:

ABC Bank wants to sell its term deposit product to customers and before launching the product they want to develop a model which helps them in understanding whether a particular customer will buy their product or not (based on customer's past interaction with bank or other Financial Institution).

Clean the data by trying Log method to remove outliers (me) and median(Lakshmi) to remove outliers.
